A Winning Clinic Management System for Patients and Students

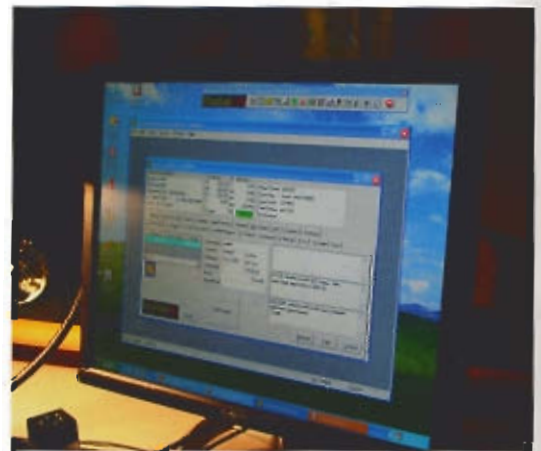

The School of Dentistry completed installation of Windent, a comprehensive clinic management software system that streamlines the School's extensive data and application needs. Windent provides seamless management of patient scheduling, billing, receivables and collections; analysis of income and expenses; and monitoring and assessment of student productivity.

Dental Faculty Practice went live on Windent in November 2004, followed by predoctoral clinics in August 2005, graduate clinics and Oral Surgery in June 2006, and Pediatric Dentistry in July 2006.

"Students benefit from having direct access to their clinical progress, pool of assigned patients, appointment schedules and reports for academic achievement and clinic revenue accomplishments," said Mr. Mike Morgan, director of information technology. "The revenue reporting helps them develop business management skills needed in private practice. Students also benefit from using a state-of-the-art practice management system that fully supports electronic dental imaging."

Patients also reap the rewards of the new patient management system. According to Mr. Morgan, they benefit from better monitoring of student-patient clinical care and quality control. Additionally, when a patient's dental care moves from one clinical area to another, the improved system provides a more comprehensive tracking system. Prior to Windent, each clinic in the School had a separate database. Now, all Windent patients are contained in a unified database, and no patient information is lost when a patient transfers to another clinic in the School.

An added bonus to Windent's capabilities is a unified database eliminating redundant information entry. Combining the functionality of five different clinic management systems from four different vendors into one system from one vendor significantly enhanced the School's technical support for students, faculty, staff and patients alike.

"The conversion of data from prior systems to Windent has been the biggest challenge. The School's data and application needs are extensive and demanding. Windent technicians and dentistry personnel worked extremely hard to meet these needs."

Mike Morgan
Director of Information Technology
